

# Milestone 2

## 1. Create a Meta Title tag for each page on the site.

A title tag is an HTML element that specifies the title of a web page. Title tags are displayed on search engine results pages (SERPs) as the clickable headline for a given result, and are important for usability, SEO, and social sharing. The title tag of a web page is meant to be an accurate and concise description of a page's content.

## 2-Create a Meta Descriptions tag for each page on the site.

The meta description is an HTML attribute that provides a brief summary of a web page. Search engines such as Google often display the meta description in search results, which can influence click-through rates.

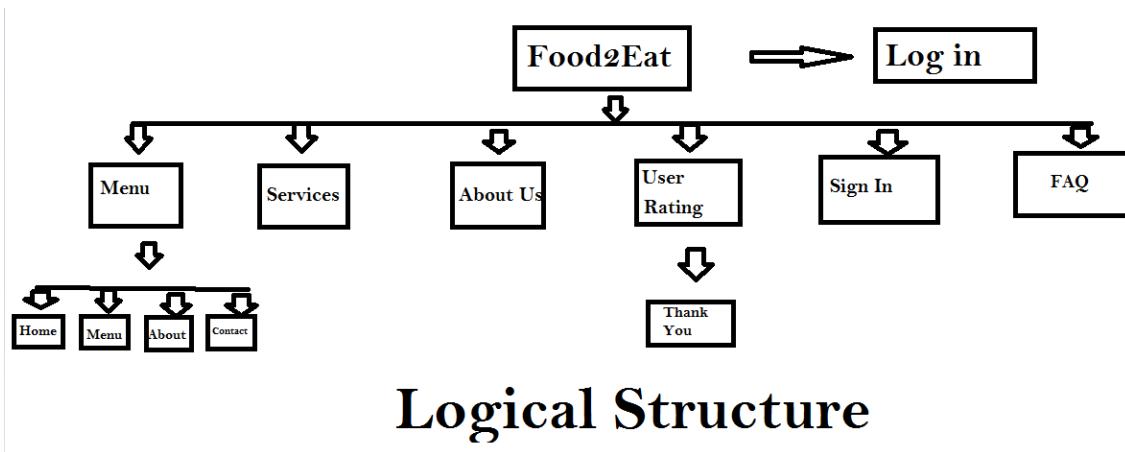

A screenshot of a code editor window titled "Edit file". The path shown is "/domains/food2eat.store/public\_html/index.html". The code editor displays the following HTML code:

```
1 <!DOCTYPE html>
2 <html>
3 <head>
4 ...
5
6 <title>Food 2 Eat</title>
7
8 <meta name="google-site-verification" content="qqWXEMY3wEc1tkPg4FQWiQE_Y0tBL4SabzORXI774sY" />
9
10 <meta charset="UTF-8">
11 <meta name="description" content="Orders are customer requests to prepare and deliver food. All food on-demand businesses receive orders via an app, a website or phone. The orders could be for their own kitchen or another meal provider they have partnered with. ... Businesses can have different Food delivery models depending on various factors.">
```

## 3-Make sure there is a logical structure for the site.

A **logical structure** is one where the document is divided into a number of sections. Each has their own headers, paragraphs, lists and images so that information flows logically from one section to the next. Get rid of all those tables, JavaScript menus, maps and layers.

## Logical Structure

### 4-Create H1, H2, H3 for each page.

Tradition since 2021

Excepteur sint occaecat cupidatat non proident, sunt in culpa qui officia deserunt mollit anim id est laborum consectetur adipiscing elit, sed do eiusmod tempor incididunt ut labore et dolore magna aliqua.

## 6-You are expected to have a shareable website.

It has a domain <http://food2eat.store> and hosting also so, it's a shareable website.

## 7-Create an FAQ on the site (Base it on market questions)

A frequently asked questions (FAQ) forum is often used in articles, websites, email lists, and online forums where common questions tend to recur, for example through posts or queries by new users related to common knowledge gaps. The purpose of an FAQ is generally to

provide information on frequent questions or concerns; however, the format is a useful means of organizing information, and text consisting of questions and their answers may thus be called an FAQ regardless of whether the questions are actually *frequently* asked.

The screenshot shows the Food2Eat website. At the top, there is a navigation bar with links for Menu, Services, About Us, Contact Us, User Ratings, Sign In, and FAQ. The 'FAQ' link is highlighted with a yellow box. To the right of the navigation is a 'Order Now →' button. Below the navigation, the word 'FOOD2EAT' is displayed in a large, bold, dark font. To the right of the logo is a quote: "'People who love to eat are always the best people.' 'To eat is a necessity, but to eat intelligently is an art.' 'We all eat, and it would be a sad waste of opportunity to eat badly.' 'If you really want to make a friend, go to someone's house and eat with him...the people who give you their food give you their heart.'" Below the quote are two images: a pizza on the left and a sandwich/burger on the right.

## FAQ

What exactly is Food2Eat?

Food2Eat is the mobile application with a sole objective of empowering small businesses, local food outlets and other businesses with a tool that enables them to reach customers within a few taps on the screen. Developed by ValueAppz, this mobile application helps you combat the terror of e-commerce giants that are becoming more & more gigantic. With the help of this app, the restaurant owners can market their menu online and also manage everything, from buying process to tracking payments- on their smartphones/ devices.

Is this app suitable for my business?

Absolutely! This app is for all those restaurants that have a compelling menu, but are lagging behind simply because they have no online presence. Food2Eat gives you your dose of local SEO by empowering you, and helping you reach customers' smartphones. You can put your banners and select the theme at your whim.

Can I change the delivery time?

Yes, in the admin panel, you can change the delivery time and other details of the restaurant as per your convenience.
